

BIOL 3427: Plant Science
Quiz 5, 6 March 2008

1. Cellular respiration is an exergonic reaction.
2. During aerobic cellular respiration, which reactant is reduced? oxygen
3. During photosynthesis, which molecule is split to produce oxygen? water
4. #3 occurs during which set of reactions? Light or light-dependent or energy transduction
5. I: C4 and CAM plants use the same biochemical pathways to fix carbon.

Other answers were accepted if they were correct, but these were the ones I wanted.
