

Site Utilization Plan for Construction of New Engineering Research Complex

Construction of the new Engineering Research Complex building will soon be underway. In preparation for the construction, changes will soon be implemented in the site vicinity beginning the week of July 7th. Among them will be the closing of College and Yates streets. College St. will be closed for the duration of the construction project and as a result, the entrance to Faculty/Staff parking lot F-12 has been moved to West St. Access gates which were at the West St. entrance have been removed, to facilitate more efficient entry and exit to the lot. Yates St. will be closed permanently to public traffic. It will reopen as a pedestrian mall at the conclusion of the construction, similar to other mall areas on campus. Parking lot F-13 located within the construction footprint of the new Engineering Research Complex building will be removed. Parking lot 14, north of Nedderman Hall will be used for construction functions and deliveries only.

Pedestrian entrances to Nedderman Hall and the Engineering Lab Building will remain the same, open to faculty, students and staff. After construction, parking lot 14 will become a campus green space. In addition, the pedestrian cross-walk at UTA Blvd. and Yates St. has been relocated to the east side of Cooper St. Access to the ADA parking lot will be provided by allowing two-way traffic on 1st St., from West St. to the College St. entrance. For the safety and security of the UT-Arlington community as well as the public, fencing will be installed to surround the entire construction site.

Predominant features of the site plan highlighted on the Site Utilization Plan, which can be accessed through the UTA Facilities Management web home page.
