Interprofessional education: Students’ perspectives
- Describe students’ perspectives of IPE at the beginning and end of an IPE program.
- Interpret data to provide strategies for those considering IPE programs.
  - Purpose: The purpose of this study was to describe students’, including Pediatric and Acute Care Pediatric Nurse Practitioner and Master of Social Work, perceptions of general and specific aspects of IPE prior to and at the end of an IPE program lasting two semesters.

VIRTUAL INFANT PATIENTS, FAMILIES, AND STAFF COLLABORATION: SIMULATING SITUATIONAL MEDICAL SCENARIOS WITH A VIRTUAL LIVING WORLD

Medical training simulations mirroring the immersive environment of commercial video games offer benefits superior to physical mannequins. We have developed a recursive platform for the development and visualization of socio-cultural models in medical situations. The model integrates visualization, sound design, and behavioral/cultural modeling with recursive assessment tools to create a living world that is sensory and culturally realistic.
CAN GAME PLAY TEACH STUDENT NURSES HOW TO SAVE LIVES: AN UNDERGRADUATE TRAINING PROPOSAL FOR STUDENT NURSES IN PEDIATRIC RESPIRATORY DISEASES WITH A LIVING WORLD GAMING CONSTRUCT

The academic environment tends to “abstract” clinical concepts by teaching them in the classroom, i.e., out of context. Immersive video game technology may be a powerful medium for delivering nursing content and offers a variety of benefits superior to physical mannequins or standardized patients. The purpose of the study was to compare pediatric respiratory content delivered through a virtual world to the standard “in the seat lecture”.
