

# **Energy in the 21st Century**

**David Levy**

Affiliate Finance Manager  
ExxonMobil Corp.

Energy-related issues have dominated media coverage in recent months. Whether it is a debate about increasing access to supplies, energy security, industry earnings, climate change, the challenge of meeting higher demand or questions about gas prices, no global industry generates more discussion than energy.

In this presentation, Mr. Levy tackles many of the hot-button issues currently on the minds of people across the globe. He begins with a discussion of the global market, including supply/demand issues and the important role governments play in ensuring the market functions properly. From there, he explores the key role of technology in meeting growing energy needs – from ones that enhance our ability to find, develop and deliver new supplies to others that increase the efficiency and lower emissions in vehicles, including hybrids.

David Levy is responsible for global affiliate finance, with a primary focus on affiliate capital structure and intercompany finance. He holds a bachelors of science in chemical engineering from Washington University in St. Louis and an M.B.A. from New York University. Mr. Levy is also a Certified Public Accountant. Mr. Levy joined Exxon in 1989, and has worked in a variety of assignments with increasing responsibility throughout the finance function, including assignments in Houston, Dallas, the Netherlands, and Thailand. David serves on the National Board of Directors of Mothers Against Drunk Driving.
