

# The University of Texas at Arlington

## Annual Computer Security Conference

---

### Conference Overview:

The University of Texas at Arlington provides an annual conference on methods and practices of safe computing and information security. Our audience is diverse in their knowledge of computing including everyone from experts in the field to the novice who wants to learn more on how they can keep their computer and sensitive information more secure. We are looking for professionals in the Information Security field (especially those representing Higher Ed, Government and Industry) to attend and participate in our conference. If interested in participating as a presenter please contact us. As conference details become available, they will be posted to our website [www.uta.edu/security](http://www.uta.edu/security).

### Call for Presentations:

The University of Texas at Arlington OIT Information Security Office is providing a stage for those who are interested in education and promoting the security of computers, networks and sensitive information. Our past Computer Security Conferences have included presentations on Identity Theft, Social Networking, Botnets and Malware, Computing Security Basics, Encryption and e-Discovery. We encourage suggestions on additional topics that are related to computer and information security.

Because of such diversity in our audience we ask that presenters keep in mind that not all participants have a high degree of technical knowledge. Therefore we ask that presentations strive to meet a middle ground for our audience so that all may benefit. In order to provide for accessibility we require that all papers, bios, presentations and documents be posted to our website prior to the event.

Prospective presenters are invited to submit an email of interest to David Wood at [dwood@uta.edu](mailto:dwood@uta.edu). Please include your bio, topic description and any questions that you may have about the conference in the body of your email. Presenters selected will be invited to speak at our Annual Computer Security Conference. Presentations may mention products in explaining a point but any presentations determined to be "selling or promoting a product" will not be approved. Presentations should be 45 minutes long with a 5 minute Q&A session included.

**Space is limited, please email us if interested and include personal bio and topic description.**

### Benefits of Presenting:

Besides the opportunity to present your information to an audience of scholars and peers you will be helping to educate a diverse group of people from the community on better ways to protect computers and sensitive information. Such a distribution of knowledge benefits us all! Your presentation and name will also have exposure to many of our guests who will be joining us from area corporations and educational institutes as well as the many bright minds of our student body. Be sure to provide your contact information in your presentation since this is sure to be an ideal networking event.

On behalf of The University of Texas at Arlington we thank you for your interest. - David Wood
