

CPS at a Glance

Are they **nodding yes** or **nodding off**?

CPS keeps students engaged in your lectures.

Our Classroom Performance System (CPS) may be the best way you'll ever find to keep an entire lecture hall of up to 1,000 students involved. It provides them with an interactive way to stay focused on your lecture so that they retain the material. Plus, it gives you an easy way to monitor whether your students are answering the questions and understanding the material.

CPS consistently measures comprehension.

With CPS, you'll always know if your students are getting it. Just ask a question during a lecture and CPS will instantly tell you what percentage of students answer correctly. It will even let you know which students don't answer, virtually ensuring 100% involvement.

CPS transforms the lecture hall dynamic.

Because you will instantly know what material your students comprehend, you can focus on teaching what they don't know. No more wasting time covering material they already understand.

CPS easily takes attendance.

CPS can automatically take roll when your students answer a question. This eliminates wasted time, increases average attendance, and makes it easy to award class participation credit.

CPS makes grading and posting scores online simple.

CPS automatically grades tests in real time and allows you to stream scores directly to WebCT and Blackboard. This gives students immediate access to their grades and reduces time spent on administrative tasks.

CPS provides several options for loading lectures, quizzes, and tests.

- Use your existing Microsoft® PowerPoint® presentations to create lectures or tests
- Employ the CPS for PowerPoint Add-in to use Microsoft® PowerPoint® with your response pads
- Create your own materials with CPS's question authoring functions
- Use the Content Search tool to search and download materials
- Access online questions from over 40 textbook publishers with **ExamView®**
- Integrate all of your computer's multimedia seamlessly

eInstruction® is the global leader in the response pad industry, relied on by over 3 million users in schools and over 700 colleges worldwide.

Students use a radio frequency response pad with a three-line LCD screen that handles multiple choice and numeric responses.

A receiver attached to your computer, works with the CPS software* to record and automatically grade students' answers.

* Mac and PC compatible
