Using the **Electronic Journals Form** To Find Articles in **Electronic Format**

Find these articles:

**Are they available electronically?**

3 Ways to find out if a business journal is available in electronic format:

1. “Electronic Journals” from Quick Links (left side of UTA Libraries’ Home Page). Type in Journal Title.

2. PULSe, Select “Journal Search” and type in Journal Title.

3. Business Source Premier, Click on “Publications Search” and type in Journal Title.

Using the **Electronic Journals Form** To Find Articles in **Electronic Format**

**Electronic Magazines & Journals**

This page only includes links to collections containing full text journals available electronically. The UTA Libraries subscribe to many other journals and magazines which are available in the Libraries. Consult the [Online Catalog (PULSe)](http://www.uta.edu/library/) to determine if a journal is available in non-electronic format at UTA. Access to some journals may be restricted to UTA faculty, students, and staff.

- [Search or Browse Journal Titles](#) | [Journal Collections](#) | [Databases with Full-text Articles](#) | [Other Electronic Journal Sites](#)

**Type in Journal Title & Click “Submit”**

</table>

**FYI**: ASCII text usually omits tables & graphs. Image (pdf) has the entire article.
What do Search Results Indicate?

- For the #1 article, dated July-Aug 2002, the first listing of the journal, *Operations Research*, is the better choice, because it indicates that the most recent issues are available. [The 1989 date of the #2 article is too far back to be included from this vendor’s 1998-Current coverage].

- For the #2 article, dated Jan-Feb 1989, the second listing of the journal, *Operations Research*, is the better choice because it indicates that EBSCOhost provides full image access, back to Jan 1967. [The date of the #1 article falls in the embargoed (unavailable) period of most recent 12 months].

- Both links are underlined on the left side, indicating direct links. Otherwise, links go to database start pages.

What do Search Results Indicate?

- Based on the dates of coverage shown on the “Electronic Journal Search Results,” the first listing of the journal, *Operations Research*, is the better choice to find the article dated July-Aug 2002. This is because it indicates that issues from “1998 to current” are available.

- The second listing of the journal, *Operations Research*, is the better choice for the article dated Jan-Feb 1989, because it indicates availability back to Jan 1967. This vendor has an “embargo” that blocks access to the most current 12 months.

- Both links are underlined on the left side, indicating direct links. Otherwise, links go to database start pages.

- Both provide “image” format for this journal.
