SpacePark360: Infinity

The fastest fulldome show continues with ***SpacePark360: Infinity!*** With nine all-new rides and a great new soundtrack by Maggie Smith Kühn, along with producer Will Wheeler, **SpacePark360: Infinity** will make its Texas debut at the Planetarium at UT Arlington this fall. Details and the fall schedule are still pending, so stay tuned!

Maggie Smith Kühn rocks out on nine new tunes which will be made available on CD soon. [Check out a preview of the rides here.](#)

Tips for Enjoying the Moon-drenched Perseid Meteor Shower

It's time again for the peak of the Perseid meteor shower, often the best meteor shower of the year – definitely a sky highlight of our Northern Hemisphere summer. At its peak, the Perseids often rain down 50-100 or more meteors per hour. The bad news is that the bright supermoon is interfering with this year's Perseid display, washing out all but the brightest Perseid meteors on the peak nights of August 11-12 and August 12-13. The good news is that, according to NASA, the Perseids have more fireballs – or bright meteors – than any other annual meteor shower. So give the Perseid shower a try, despite the moon, for a good percentage of these colorful and swift-moving meteors often leave *persistent trains* – ionized gas trails that linger for a moment or two after the meteor has gone. The tips below can help you enjoy.

1. Watch between midnight and dawn.
2. Avoid city lights.
3. Sprawl out in a moon shadow.
4. Watch with friends!

For even more tips and great meteor photos, head over to the full article on [Earthsky.org](https://earthsky.org).
