Instructor: Dr. P. S. Shiakolas
Office: 315 D Woolf Hall, Phone: (817) 272-5715 Email: shiakolas@uta.edu
Course Web Page: http://mars.uta.edu/mae4310 (check regularly for announcements)
Office Hours: Tue 4:15 – 5:00 pm and by appointment
GTA: To be announced
Prerequisites: MAE 3319 or MAE 3405
Text: Modern Control Engineering by K. Ogata, 5th Edition

Description of Course Content: Introduction to Block diagram algebra, transfer functions and stability criteria. Use of transient response, root locus and frequency techniques in the performance, analysis, design, and evaluation of dynamic control systems.

Grading Policy – Expectations – Course Logistics

Assume no collaboration is allowed unless expressed permission is obtained from the instructor.

Anyone collaborating in HWs will be given a grade of zero on the particular HW.

Anyone collaborating on an exam will be given a failing grade in the course.

Pop Quizzes (1.5 pts each): Pop quizzes will be based on the assigned reading or material covered in class. A pop quiz might take place at any time during the lecture period and in addition to the above will also cover the material that is currently being presented. There is no makeup for missed pop quizzes.

Homework (2 pts each): The purpose of the homework is to provide practice exercises that apply the theory and concepts presented in class in order to identify and improve on any deficiencies that might exist. It could be either analytical and/or computational. I reserve the right to inquire you to demonstrate your work. Homework is due at the beginning of class.

Late homework will not be accepted.

Semester Exam(s) - one exam 35 pts, two exams 20 pts each, three exams 15 pts each: The exam(s) will be comprehensive and may consist of two parts (an analytical and a computational). Note that part or the whole exam may be take-home. Any in-class exam will be closed book-notes-calculators-cell phones. The time of the exam(s) will be announced later and the exams will not necessarily last the whole class meeting.

Final Exam (50): The final exam will be comprehensive and may consist of two parts; an analytical and a computational and will be closed book-notes-calculators-cell phones. The exam will be given at the university scheduled time. If there will be a computational part, it could be given the last week of classes.

Makeup Exam: No makeup exams will be given unless I am notified in advance and approve of it. If you miss an semester exam due to an illness or other approved reason, there will be only one comprehensive makeup exam the last week of the semester.

Key Assignment(s): In order to pass the class, students must submit and pass all key assignments otherwise the student will not pass the class even if he/she scores perfectly on all exams and other assignments. The key assignments will be announced on time.

Attendance: It is your responsibility to attend the lectures, participate in class discussion and keep up-to-date with the course material. I do not re-teach covered material during office hours. If you are habitually late, you will not be allowed in the class as this is disruptive to the other students.

Drop Policy: According to university regulations and schedule.

Guaranteed Grading Scale: The guaranteed grading scale based upon the minimum percentage number of points obtained is shown below. Note that no incompletes will be given unless prior arrangements are made and in extreme circumstances

90% - 100%: A, 80% - 89%: B, 70% - 79%: C, 60% - 69%: D, 0 - 60%: F

Course Web Page: The web will be used as a means of communication – check it often. It is houses at http://mars.uta.edu/, select Courses and then select Introduction to Automatic Controls MAE 4310.

Communication: Email communication will be through the MyMav system to your official UTA issued email account.

Software: You may use any computer software that you like and there are a many available such as SCILAB http://www.scilab.org, Octave http://www.octave.org, MATLAB http://www.mathworks.com, Maple http://www.maplesoft.com, Mathematica http://wolfram.com, LabVIEW MathScript http://www.ni.com and many others. Make sure that you can have access to the software during the semester and you are proficient in it for the purposes of this class.

MAE 4310 Syllabus for Summer 2010 Semester
Remember that computer tools are there to help you to better understand certain concepts – DO NOT just learn how to exercise the software tools but make sure you understand the underlying theory and concepts.

**Additional Reference Material:** Modeling and Controls related books are available in the engineering library and software resources available on the internet – some links are provided on class web page.

**Miscellaneous:** If you have a disability, any religious holidays that you need to observe or anything else that might interfere with this class and you would like for me to know about it you must inform me in writing no later than the third class meeting.

The sciences do not try to explain, they hardly even try to interpret, they mainly make models. By a model is meant a mathematical construct which, with the addition of certain verbal interpretations, describes observed phenomena. The justification of such a mathematical construct is solely and precisely that is expected to work.  

---

**System Representation**
A. Differential Equations (Rev)
B. Transfer Functions (Rev)
C. Block Diagrams
D. State Space (Rev)

**System Transient Response Analysis**
A. Pole, Zero Analysis
   - Analytic (Rev)
   - Computational (Rev)
B. Time Domain Response
   - Analytic (Rev)
   - Computational (Rev)
C. Frequency Domain Response
   - Frequency Response
   - Laplace Transform (Review)
D. Stability

**Feedback Control Systems**
A. Effects of Feedback Control
B. Classical Control Action
   - Proportional (P), Integral (I), Derivative (D)
   - Combinations PI, PD, PID
   - Analog implementation

C. Error Analysis – Controller Design
   - Initial and Final Value Theorems
   - Static, Dynamic Error
   - Performance Indices
   - Controller Tuning
D. Sensitivity Analysis

**Controller Design (Pole-Zero locations)**
A. Root Locus Analysis
B. Frequency Response Analysis
   - Bode Plot
C. Compensation Analysis
   - Lead, Lag Compensation and combination

**State Variable Feedback Systems – Modern Control**
A. Controllability and Observability
B. Observer Design - Optimal Control
C. Estimation and Kalman filtering (time permitting)

**Digital Control Systems (time permitting)**
A. z-Transform and Bilinear Approximation
B. Sampling Rate
C. Controller Implementation and Hardware Demonstrations

---

**Americans with Disabilities Act**

The University of Texas at Arlington is on record as being committed to both the spirit and letter of federal equal opportunity legislation; reference Public Law 93112-The Rehabilitation Act of 1973 as amended. With the passage of new federal legislation entitled Americans with Disabilities Act – (ADA), pursuant to section 504 of The Rehabilitation Act, here is renewed focus on providing this population with the same opportunities enjoyed by all citizens. As a faculty member, I am required by law to provide "reasonable accommodation" to students with disabilities, so as not to discriminate on the basis of that disability. Student responsibility primarily rests with informing faculty at the beginning of the semester and in providing authorized documentation through designated administrative channels.

**Academic Dishonesty**

It is the philosophy of The University of Texas at Arlington that academic dishonesty is a completely unacceptable mode of conduct and will not be tolerated in any form. All persons involved in academic dishonesty will be disciplined in accordance with University regulations and procedures. Discipline may include suspensions or expulsion from the University. "Scholastic dishonesty includes but is not limited to cheating, plagiarism collusion, the submission for credit of any work or materials that are attributable in whole or in part to another person, taking an examination for another
person, any act designed to give unfair advantage to a student or the attempt to commit such acts." (Regents’ Rules and Regulations, Part One, Chapter VI, Section 3, Subsection 3.2, Subdivision 3.22)
